If we agree with the proposed scope, our criteria for deciding what to include in the specification becomes:

SCOPE

- Does it help us answer these questions about **sufficiency:**
  - What provision where, at what cost and at what notice would help us meet the unmet demand?
  - What is the business case for creating this provision?
- **[to explore]** Where should we invest to reduce demand and what is the business case for this?

IMPLEMENTATION

- Can it (in total) be answered by a placement worker in less than 90 seconds
- Can it be gathered without needed suppliers to change

ADDITIONALITY (NOT REINVENTING THE WHEEL)

- It is not already gathered in an existing statutory return or dataset

Your votes showed a clear preference for the data standard to focus on sufficiency questions, but 2 other areas emerged for consideration

Use cases you voted for	Your suggestions for analysis the standard should support (sample)	Total votes
Sufficiency analysis	• *Does the current local provision closely match needs of our children?* • *Where did we ideally want to place?* • *where is placement based on cost rather than 'best fit'?* • *Forecasting future demand*	**21**
Understanding drivers of reduced demand	• *E.g. How much placement instability is there, and what is causing it?*	**3**
Understanding provider pricing models	• *What fees are being charged, what staffing is in place, how many beds are available in different areas* • *What is the impact of different contract mechanisms on provider pricing?*	**8**

We suggest exploring expanding scope to demand, and keeping provider pricing out of scope for now

Use cases	Definition	CONSIDERATIONS FOR WHETHER TO PULL IN SCOPE			SCOPE REC
		ADDITIONALITY Does existing statutory data address this?	**IMPACT** Would data standardisation be critical level to address issue?	**FEASIBILITY CHALLENGE** What is the burden of implementing standard around this (for single LA)?	
Sufficiency analysis	What provision where, at what cost and at what notice would help us meet the unmet demand and what is the business case for creating this provision?	**HIGH** No other statutory data addresses this	**HIGH** Would allow single regional or national view and regional business cases for investment	**MODERATE** Change to SW/placement worker data gathering	***In scope***
Understanding drivers of reduced demand	Where should we invest to reduce demand and what is the business case for this?	**MODERATE - HIGH** SSDA903 data provides some insight but analytical insight from statutory data is limited	**HIGH** Would allow single regional or national view and regional business cases for investment	**MODERATE** (likely) Change to SW/placement worker data gathering	***Explore further***
Understanding provider pricing models	What are the key drivers of provider pricing models (e.g. fees, staffing models, geographic availability, contracting mechanisms)	**MODERATE** Ofsted provider table provides some supply-side detail on residential provision	**MODERATE - HIGH** Would allow single regional or national view	**HIGH** Provider buy-in needed	***Out of scope (for first release)***
