Multi Agency Information Sharing (MAIS) Standard Development Working Group

29th January 2026

PRIVATE AND CONFIDENTIAL

Agenda

14:30 -14:35 (5m)	**Welcome and housekeeping** Andrew Newman, ODI
14:35 -14:55 (10m)	**Story so far** Andrew Newman, ODI
14:45 – 14:55 (10m)	**2026 Priorities** Harry Angus, Social Finance
14:55– 15:05 (10m)	**Discussion on 2026** Andrew Newman, ODI
15:05 -15:50 (45m)	**Data Requirements Deep Dive (Interactive Session)** Neil Majithia, ODI
15:50 -16:00 (10m)	**AOB and Close**

Things to be aware of

Conflicts of interest – Please inform the chair / secretariat if you think there is a risk.

Anti-competitive activities – Please inform the chair / secretariat if you think there is a risk of anti-competitive activity.

Intellectual Property - If you are concerned about the use of your contributions, please contact the secretariat.

Meeting Recording - We will record the meeting and using AI transcription tools.

Working together

1. Every voice matters
2. Please join in on the conversation, we don’t want this to be one way
3. If you’re happy to, keep your camera on
4. Please raise your hand if you want to come in, or drop your ideas in the chat
5. Respect the diverse viewpoints in the room, assume positive intent and remain open for different experiences
6. We will be using Miro to support our discussions today

News!

Receive our regular newsletter

Sign up at:
- http://eepurl.com/jnmjYs

Website: https://socialcaredata.github.io/ (start here!)

GitHub: https://github.com/SocialCareData

We are using GitHub to work openly:

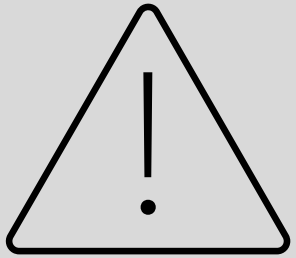
- Store our specifications
- Track feedback on specifications (Issues)
- Openly share project documentation
- Have Discussions to inform the development of standards

- In the future we will use GitHub to:
- Host and manage the development of any infrastructure or tools we need to develop
- Enable people to reuse our specifications and code

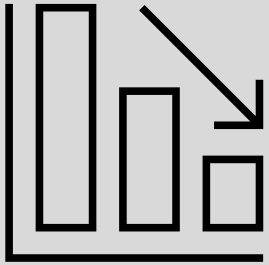
We will work to keep this simple and provide guidance when needed.

Story so far

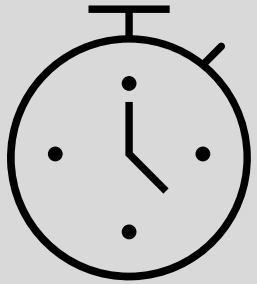
We focused on defining standards to drive four key benefits:



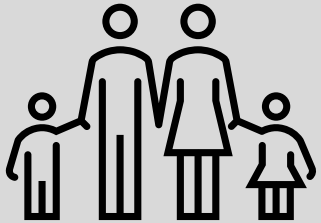
Improved data sharing to support frontline decision making



Better analysis to support strategic decision making



Access to productivity-enhancing tools for frontline staff



Enabling those using social care to see and contribute to their record

Portfolio logic for year one was about getting started:

1. **Build our LA coalition** – therefore a use case where standards can reliably create a lot of value, fast, in an area DCSs (later DASSs) already care a lot about.

2. **Move quickly into implementation** so we can build the institutions, methods and tools we need for that – therefore a use case with tight scope and very few dependencies.

3. **Get us straight into what's high-value (interoperability) but hard,** building foundations for other use cases and establishing viability with vendors.

Placement Commissioning

Multi-Agency Safeguarding

What we achieved in 2025

We completed a draft standard for each of the key elements required to make national rollout of SingleView systems possible. These are now ready to be tested.

Person Standard:
Defining which fields should be standardised to enable identification of a person

Information Governance Operations Standard
Enabling one system to assert to another that its request for information is authorised

Data Exchange Standard
To support movement of data between systems

What we achieved in 2025

We completed a draft standard for each of the key elements required to make national rollout of SingleView systems possible. These are now ready to be tested.

Standards Working Groups

Established standards working groups with a wide range of stakeholder participants

Collective Decision Making

Patterns and processes for making decisions as a community

Open Working

Published drafts and iterated them publicly based on feedback

We asked for your views on what next...

Strategy

- Start with the business, not the data
- Break down silos to information sharing
- Enable cooperation not interoperability

Deliverables

- Address reference data sharing
- Catalogue and publish existing standards and say how they are useful
- Consider statutory reporting
- Pick existing and tailor to the need
- Enable data to be shared securely

Adoption

- Make it all work
- Make it easier for suppliers to integrate
- be adopted!
- be adoptable / implementable by LAs with limited resources
- Be accessible and easy to understand for long-term implementation

Engagement

- Create some resources that support selling the value of standards to senior leaders
- be understood more widely, including potential impact
- Have a clear MVP, roadmap and relationships with neighbouring work. An understanding of the stakeholder map would be valuable

Branching out...

- Play with satellites :-)

Looking ahead: 2026 Priorities

We are evolving our approach for 2026

Rationale for change

We need to manage interdependencies and provide longer-term certainty for stakeholders including other government programmes and vendors

Adult Social Care has joined the programme – we need to deliver benefits for both ASC and CSC

We need to focus on programme efficiency to deliver maximum programme benefit with the time we have. A use case-led approach will not do this.

We are evolving our approach for 2026

Rationale for change

We need to manage interdependencies and provide longer-term certainty for stakeholders including other government programmes and vendors

Adult Social Care has joined the programme – we need to deliver benefits for both ASC and CSC

We need to focus on programme efficiency to deliver maximum programme benefit with the time we have. A use case-led approach will not do this.

Our principles for 2026

1. **Plan further ahead –** what is in scope over 18-24m, not just the next 6m
2. **Greater focus on foundational standards** - creating a solid platform for work which will continue long after us
3. **But not ignoring the specific use case benefits –** we still need to ensure we have a route to quick and visible benefit for LAs and people

Our approach to synthesis and prioritisation

To consolidate our research and clarify the roadmap for 2026 we:

1 Articulated 15 CSC and ASC use cases

- Clarity on the benefits they create, and for whom, and their dependencies
- The requirements they pose

2 Articulated 65 technical requirements and evaluated feasibility

- Identified 'foundational' requirements
- Assessed LA and vendor acceptability

3 Identified roadmap parameters

- Timeframe and team capacity
- 'Must haves' for the programme e.g., SUI interdependencies

4 Explored different approaches to portfolio logic

- Comparing development options optimising for different priority outcomes
- Articulated trade-off decisions

>

What the process and outputs of this approach clarified:

- What the **technical foundations** are to enabling interoperability in social care
- What the **benefits we could create for whom**, and what decisions need to be made between beneficiaries
- **How we construct the portfolio** of social care standards for 2026 and 2027, incl how we sequence delivery

As we move into the next phase, we are aiming to:

Develop foundational interoperability standards that define how social care systems safely share, trust and interpret information across organisations. This will cover**:**

a) **Interoperability functionality** – *how* systems safely exchange information

b) **Core data model -** *what information* means and how it is structured

AND

Develop additional standards (building on our foundations) that unlock benefits across the specific use cases within the following themes:

a) **Multiagency data sharing for safeguarding and wellbeing**

b) **Multiagency data sharing for integrated health and care planning**

Our approach addresses cross-cutting issues while also focusing on unlocking specific data sharing benefits

Developing domain-specific requirements under these use case themes…

…alongside domain-agnostic foundational standards

*Multiagency data sharing for **CSC safeguarding and wellbeing***

Domain-specific requirements

*Multiagency data sharing for **ASC care coordination***

Domain-specific requirements

Other use cases

Domain-specific requirements

What we won't be doing

Foundational standards (domain-agnostic requirements)

What this means for the MAIS Standards Working Group

Across 2026, the MAIS standards workstream will focus on:

1. **Testing of the existing standards** designed to enable a Single View for safeguarding enquiries
2. **Deepening of the standards for child safeguarding** - aiming to add more value within the same use case
3. **Extension into use cases beyond safeguarding**, focusing on care coordination for adults

Over the year we will **seek SME input from the Working Group**, in particular **insight to inform development of standards to address data requirements**

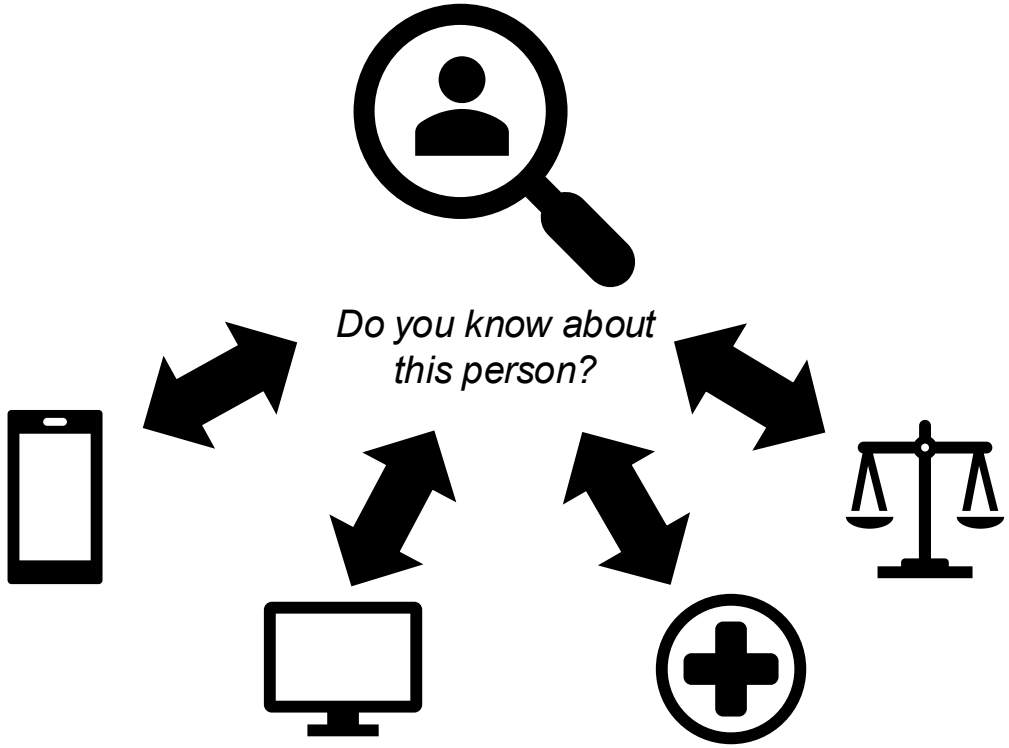
Discussion

Data Requirements Deep Dive

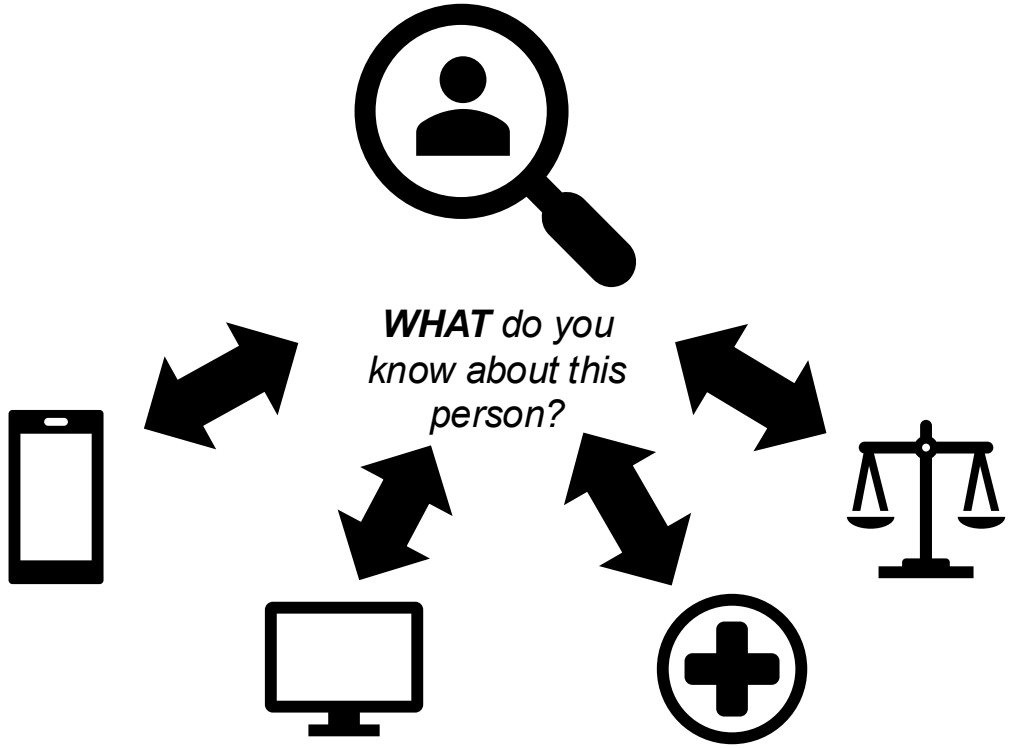
What is the minimum amount of information a social worker needs to ensure the greatest standard of care for a person?

We're branching out

From sharing identification in MAIS scenarios...



… to sharing care information, too.



We need to ensure care information in a large-scale MAIS infrastructure is reliable, useful, and trustworthy.

We need to ensure care information in a large-scale MAIS infrastructure is reliable, useful, and trustworthy.

We need a data standard!

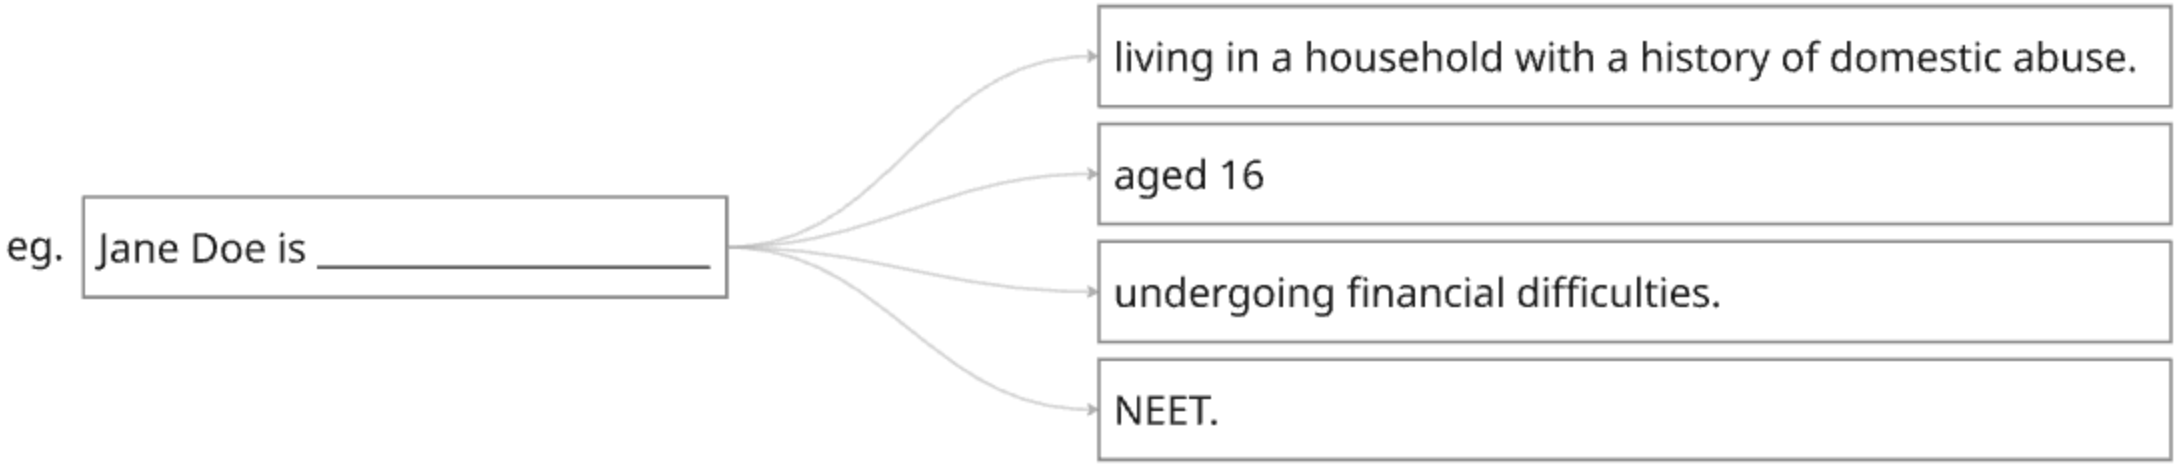
We need to ensure care information in a large-scale MAIS infrastructure is reliable, useful, and trustworthy.

We need a data standard!

(which is where you come in)

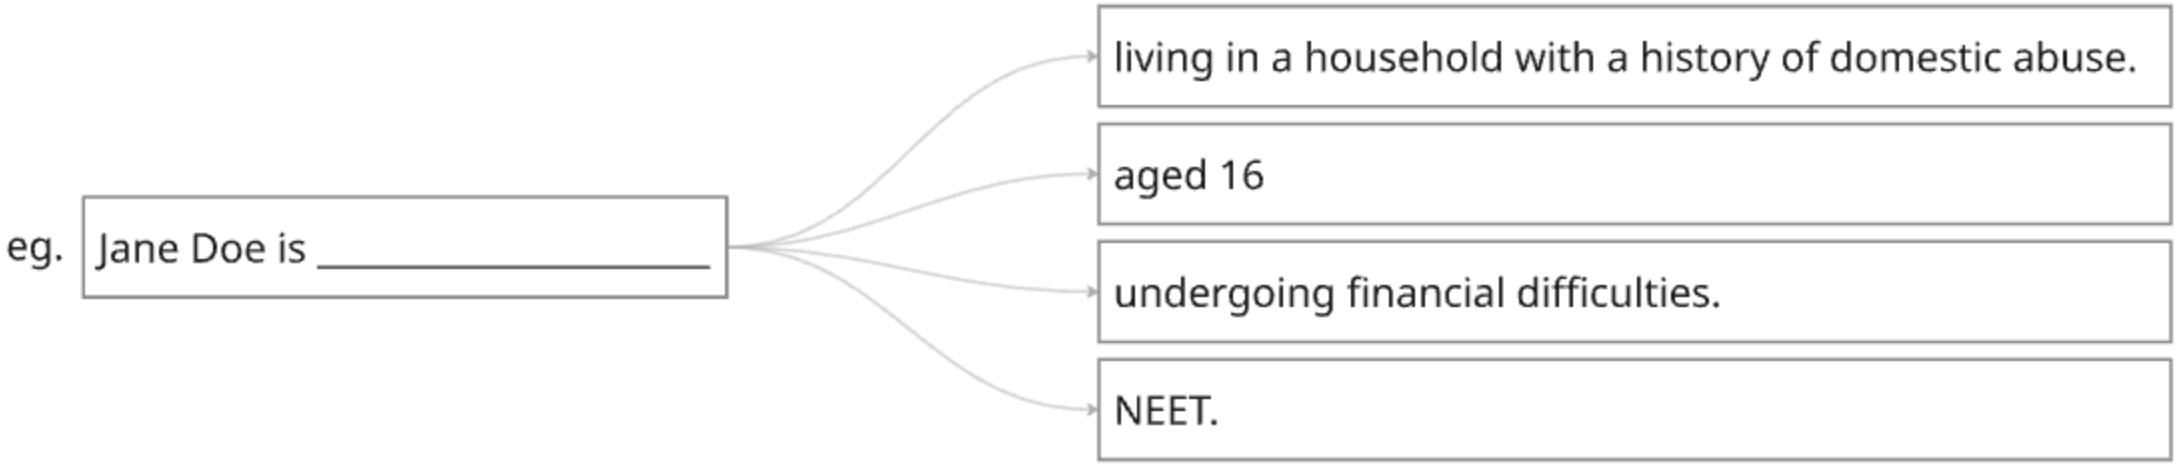
Start: attributes of a person (aka statuses, or care needs)

A person receiving support may have many "**attributes**": atomic properties that describe their situation and therefore allow a social worker to make decisions about their care.



Start: attributes of a person (aka statuses, or care needs)

A person receiving support may have many "**attributes**": atomic properties that describe their situation and therefore allow a social worker to make decisions about their care.



But there is always more than meets the eye.

has a parent released from prison

has a spinal injury

… one or more life events the person has been through

has been a victim of an animal attack

has visited a walk-in clinic

… one or more service episodes the person has had

has had police called to house

Attributes are summary points that are built from...

has an absentee parent

… one or more of the person's personal or professional relationships

has been previously allocated social worker in another county

is looked after by carer

is seeing a therapist

So, is that the plan?

Life events

Service episodes

Relationships

→ Common Data Model (CDM)

So, is that the plan?

Life events

Service episodes

Relationships

→ Common Data Model (CDM)

NO!

We shouldn't reinvent the wheel:

PRSB Professional Record Standards Body — Core Information Standard

INCLUDES STANDARDS AROUND CARE INTERACTIONS

CARE — Minimum Operational Data Standard (MODS)

INCLUDES STANDARDS FOR DATA ON CARE EPISODES

NHS England — Adult Social Care Client Level Data (CLD)

COVERS 5 CATEGORIES OF EVENTS

FHIR — Fast Healthcare Interoperability Resources

COVERS 111 DIFFERENT KINDS OF RELATIONSHIPS

Today's task

Instead, we want to know what social workers want to know *about* life events, service episodes, and relationships. We want to design the metadata.

Today's task

Instead, we want to know what social workers want to know *about* life events, service episodes, and relationships. We want to design the metadata.

A child attends an unscheduled walk-in appointment at a healthcare centre

Who?

What?

When?

Where?

Why?

Today's task

3 breakout rooms

Life events / Service Episodes / Relationships

Start with thinking about some data points

Then move to identifying metadata fields

Some may be in an ideal world; some may be realistic

Reconvene and report back

https://miro.com/app/board/uXjVGLvo-ak=/?share_link_id=957679033421

Wrapping up

Next steps

- Focusing our R&D on IDAM bulk import and export APIs
- Starting to build out our social care data model.
- Working Group Meetings:
- 26 February
  - National Records Locator Project
  - Introducing Care Coordination
  - Invite your adult social care colleagues to join this working group.
- 26 March
  - Review outputs from data modelling exercise
